

CONTENTS

Preface

- 1 Limnological research in and around the European Alps – Linking up research stations, people, ideas, and perspectives for SIL at an inter-regional scale
Serena Rasconi, Martin J. Kainz, and Bastiaan W. Ibelings

Articles

- 3 Zooplankton communities and *Bythotrephes longimanus* in lakes of the montane region of the northern Alps
Zsófia Horváth, Csaba F. Vad, Christian Preiler, Julia Birtel, Blake Matthews, Radka Ptáčnicková, and Robert Ptáčník
- 14 Bioconcentration may be favoured over biomagnification for fish PCB contamination in high altitude lakes
Marie-Elodie Perga, Yann-Michel Nellier, Nathalie Cottin, Philippe Fanget, and Emmanuel Naffrechoux
- 27 Irregular changes in lake surface water temperature and ice cover in subalpine Lake Lunz, Austria
Martin J. Kainz, Robert Ptacnik, Serena Rasconi, and Hannes H. Hager
- 34 Persistent organic pollutants in sediments of high-altitude Alpine ponds within Stelvio National Park, Italian Alps
Giulia Poma, Franco Salerno, Claudio Roscioli, Stefano Novati, and Licia Guzzella
- 45 Alpine glacier-fed turbid lakes are discontinuous cold polymictic rather than dimictic
Hannes Peter and Ruben Sommaruga
- 55 Bioaccumulation of ultraviolet sunscreen compounds (mycosporine-like amino acids) by the heterotrophic freshwater ciliate *Bursaridium* living in alpine lakes
Bettina Sonntag, Barbara Kammerlander, and Monika Summerer
- 65 Fish communities in the Anthropocene: detecting drivers of changes in the deep peri-alpine Lake Geneva
Orlane Anneville, Camille Vogel, Jérémy Lobry, and Jean Guillard
- 77 Improving estimates of primary production in lakes: a test and a case study from a peri-alpine lake (Lake Lugano)
Filippo Franchini, Fabio Lepori, and Andreas Bruder
- 88 Phytoplankton response to the summer 2015 heat wave – a case study from prealpine Lake Mondsee, Austria
Victoria Bergkemper and Thomas Weisse
- 100 Restoring lakes through external phosphorus load reduction: the case of Lake Pusiano (Southern Alps)
Diego Copetti, Franco Salerno, Lucia Valsecchi, Gaetano Viviano, Fabio Buzzi, Chiara Agostinelli, Riccardo Formenti, Alessandro Marieri, and Gianni Tartari
- 109 Alpine lakes and ponds – a promising source of high genetic diversity in metapopulations of aquatic insects
Zuzana Čiamporová-Zaťovičová and Fedor Čiampor Jr
- 118 Transparent exopolymer particles (TEP) are driven by chlorophyll *a* and mainly confined to the euphotic zone in a deep subalpine lake
Cristiana Callieri, Gianluca Corno, Mario Contesini, Diego Fontaneto, and Roberto Bertoni
